This Kansas natural gas field has its own private pipeline that connects 41 wells. The field has just a 3-mile radius, and the pipeline within the field is 5 miles long. This system, in turn, allows for delivery directly into the company's port into the national pipeline for sales. Plus, all of the wells have pumps and electricity, so this one is ready to go. With just one field port of entry, all 41 wells can be operating. All have electric pumps and electric connections. The account with the local electric company is still active.

The field, when active, was connected to a pipeline that is still connected to an inactive tap station into the national pipeline.

The pipeline to the pipeline will deliver additional revenue on the bond.

The tap station is the subject of a separate bond.
